USER & IDENTITY MANAGEMENT GUIDE

User Management Overview

User Management is the foundational step for security within the ServiceNow platform. Its primary goal is to ensure that the right person has access to the appropriate data. In this ABC Corporation project, it is essential to integrate new support agents and managers into the system to handle support tickets. This activity must be completed before configuring roles and groups.

Accessing the ServiceNow User Module

To manage users within the system:

1. Filter Navigator: Type "Users" in the search bar on the left side of the ServiceNow homepage.
2. System Security: Select the 'Users' option located under the 'System Security' application.
3. User List View: This will display the list of all existing users in the system. To create a new user, click the 'New' button at the top of the list.

Create User - Manne Niranjan (Part 1)

Steps to create a profile for 'Manne Niranjan':

- User ID: manne.niranjan (Use lowercase letters for consistency).
- First Name: Manne.
- Last Name: Niranjan.
- Email: manne.n@abccorp.com.

- Title: Senior Platform Engineer.
- Department: IT Support.

Create User - Manne Niranjan (Part 2)

Technical settings for the user profile:

- Time Zone: System (America/Los Angeles) - This ensures ticket creation times are displayed accurately.
- Date Format: System (yyyy-MM-dd).
- Password: Set an initial password and check the 'Password needs reset' box to force a change on the first login.
- Active: Ensure the 'Active' checkbox is set to 'True'.

Create User - Katherine Pierce (Part 1)

Steps to create a profile for 'Katherine Pierce':

- User ID: katherine.pierce.
- First Name: Katherine.
- Last Name: Pierce.
- Email: katherine.p@abccorp.com.
- Mobile Phone: Associate the user's official contact number.

Create User - Katherine Pierce (Part 2)

- Role Identification: Since she is appointed as the manager of the 'Certificates' group, her name can later be linked in the 'Manager' field of the group profile.
- Business Unit: Security Services.
- Internal/External: Select 'Internal' as the user type.

User Authentication & Password Management

ServiceNow security settings:

- Password Policy: Passwords must contain at least one special character, one uppercase letter, and one numerical digit.
- Locked Out: If a user enters an incorrect password five consecutive times, the account will be automatically locked. Only an Administrator can unlock it.
- MFA (Multi-Factor Authentication): Configure the system to send an OTP via a mobile app for enhanced security.

Calendar Integration (Outlook) Configuration

To monitor support agents' availability:

- Integration Type: Outlook Calendar.
- Purpose: This prevents errors in auto-assignment if an agent is on 'Leave' when a ticket is being assigned.
- Sync: Select 'Outlook' in the 'Calendar Integration' field on the user profile.

User Preference Settings

Individual settings for each user:

- Language: Set the default to 'English'.
- Accessibility: Enable specific settings for users requiring screen readers.
- Banner Image: Users can personalize their profiles by uploading a profile picture.
- Notification: Enable email notifications to ensure agents receive alerts when a ticket is assigned to them.

Active vs Inactive Status Management

- Active Status: An agent's 'Active' checkbox must be on as long as they are employed. Inactive users cannot be assigned tickets.
- Employee Off-boarding: When an employee leaves the organization, 'Best Practice' is to set them to 'Inactive' rather than deleting the account. This maintains the integrity of historical records and audit trails.

Impersonating Users for Testing Purposes

To verify if automation is working correctly:

1. Impersonate User: Click the Admin icon in the banner and select 'Impersonate User'.
2. Select User: Choose 'Manne Niranjan' from the list.
3. Testing: You can now view the system exactly as that user would. This is vital for testing ACLs and flow permissions.

Audit Log & Best Practices

- Audit Log: Details regarding who created a user and when changes were made are recorded in the 'History' tab of the record.
- Best Practices:
    1. Never create 'Generic accounts' (e.g., admin1) for individual accountability.
    2. Avoid changing the 'User ID' once a profile is created.
    3. Lock unused accounts if they have been inactive for more than 90 days.
